Durotimi Micheal Johnson

Senior Flutter Engineer | Mobile Architect | Android • iOS • Web • Desktop
Lagos, Nigeria | +234 (0) 814 864 2968 | durotimijohnson@gmail.com | LinkedIn: LinkedIn | GitHub

PROFILE

Senior Mobile Engineer with 7+ years of experience building high-performance consumer and enterprise applications across Flutter, Android, iOS, Web, and Desktop platforms.
Specialized in architecting scalable cross-platform products, delivering exceptional user experiences, and leading mobile engineering teams in fast-paced startup environments.

PROFESSIONAL EXPERIENCE

Flutter Developer (Contract) | Homemade (Local Marketplace Mobile App)
December 2025 – June 2026 | Remote

- Built and shipped a dual-sided Flutter marketplace application (buyer + seller) across iOS and Android, enabling sellers to list products and buyers to discover, purchase, and track orders end-to-end.
- Architected the application using a modular feature-based architecture with BLoC/Cubit, GetIt, Dio, and Freezed, improving maintainability across 20+ feature modules and a 500+ file codebase.
- Delivered the complete checkout and payment experience, including cart management, delivery/pickup options, coupons, and Paystack integration, streamlining the customer purchase journey.
- Implemented real-time order and wallet updates using Socket.IO, including live rider tracking with Google Maps for improved delivery visibility.
- Developed seller operations features, including product catalog management, variants, media uploads, order fulfilment, earnings, wallet withdrawals, team management, and KYC/2FA flows.
- Built responsive production-ready UI components with theme support (light/dark/system) and backend-synchronised preferences across multiple device sizes.

Senior Flutter Developer (Contract) | AptResponse
January 2025 – December 2025 | Remote

- Owned mobile architecture for dual-flavor Flutter applications (client/lawyer), supporting multi-environment releases across iOS and Android.
- Led delivery of emergency legal response and fast-consultation matching workflows using real-time WebSocket events, GPS tracking, and push notification deep linking.
- Integrated Agora RTC, Firebase (FCM/Firestore), and Google Maps into a unified legal-service experience covering voice/video calls, chat, dispatch, and live tracking.
- Designed reusable payment and consultation workflow patterns supporting wallet, card, corporate payment rails, and multiple legal service types.
- Implemented Amplitude analytics infrastructure, including event tracking, super-properties, and screen analytics to measure key product funnels.
- Drove production readiness practices across localization (EN/FR), theming/accessibility settings, API timeout/offline handling, and flavor-based configuration for safe staged rollouts.
- Owned end-to-end consultation lifecycle delivery — service discovery, scheduling, engagement requests, milestones, feedback, and status transitions across long-running legal service workflows.

Team Lead Mobile Engineer (Flutter, iOS & Android) - **PressOne Africa**
June 2023 - February 2025 Lagos, Nigeria

- Led the mobile team in delivering and maintaining cross-platform mobile applications, contributing to successful releases on both Apple App Store and Google Play Store.
- Implemented VoIP push notification architecture integrating APNs and Firebase Cloud Messaging, significantly improving incoming call reliability in background and terminated app states.
- Designed and implemented a secure authentication and refresh token system, reducing user session failures and improving login reliability.
- Integrated monitoring and analytics tools, including Datadog, Sentry, Mixpanel, and Crashlytics, are improving crash detection and reducing production issues.
- Improved app performance and background service handling, ensuring reliable real-time communication and notifications.
- Led mobile architecture decisions and code reviews, improving code quality and development workflow across the team.
- Successfully maintained and improved applications used by thousands of users for business communication and CRM operations.
- Collaborated closely with product and design teams to deliver intuitive user experiences and maintain a consistent design system across Android and iOS platforms.
- Mentored junior mobile engineers through code reviews, architectural discussions, and technical guidance, improving overall team productivity and code quality.

Senior Mobile Engineer (Flutter) | February 2022 - January 2024

- Led development of a production Flutter application serving thousands of users across Android and iOS, delivering high-performance, platform-consistent user experiences while maintaining reliability at scale.
- Implemented VoIP calling features using the sip_ua library, allowing users to place high-quality SIP-based calls worldwide with robust signaling and call management.
- Engineered solutions to handle VoIP calls in background and kill mode, leveraging push notifications, foreground services (Android), and CallKit (iOS) to ensure reliable call delivery even when the app is inactive.
- Improved application performance, stability, and responsiveness through systematic optimization, reducing crashes and improving overall user retention.
- Integrated CleverTap analytics to track user interactions, analyze call engagement metrics, and enable data-driven product decisions.
- Revamped the entire UI in collaboration with the design team, ensuring a modern, intuitive, and visually appealing experience across platforms.
- Led the successful deployment of the application on both the Google Play Store and Apple App Store, reaching over 2,000 downloads while ensuring compliance with platform-specific VoIP and security guidelines.

Lead Mobile Engineer | Remedi Africa (Fintech / Digital Operations Platform)
October 2023 – October 2024 | Remote

- Led the development of a cross-platform Flutter application supporting digital operations, financial workflows, and data-driven business processes across desktop and mobile platforms.

- Architected scalable application modules using Flutter, BLoC, clean architecture patterns, and Supabase-powered backend services to improve maintainability and product scalability.
- Implemented secure authentication flows, user access management, and role-based experiences to support different user journeys and business operations.
- Integrated backend APIs and third-party services to support transaction-driven workflows, real-time data updates, and seamless user experiences.
- Designed offline-first capabilities with local persistence and synchronization strategies, ensuring reliable access to critical business data under unstable network conditions.
- Optimized application performance through efficient state management, API handling, and UI improvements, improving responsiveness across devices.
- Collaborated with backend, product, and design teams to deliver production features, conduct technical reviews, and maintain high engineering standards.
- Established CI/CD automation workflows, reducing deployment overhead and improving release reliability.

Dandako, Lagos, Nigeria(Remote)
Mobile Engineer | February 2022 - October 2023

- Led development of three Flutter applications (Logistics, Parcel, and Driver) across Android and iOS, supporting managers, drivers, and consumers.
- Successfully published all three applications on Google Play Store and Apple App Store, achieving over 2,000 downloads and positive user feedback.
- Implemented web socket management, ensuring efficient application state handling and enhancing performance across all apps.
- Spearheaded sprint discussions, task assignments, and tracking, optimizing development workflows, and ensuring the timely delivery of features.
- Developed highly responsive and interactive UI/UX components, improving user engagement and usability.
- Integrated real-time tracking and push notifications, enhancing user experience for logistics and delivery operations.
- Integrated third-party APIs, including payment gateways, maps, and messaging services, streamlining business operations.
- Optimized app performance, reducing load times and improving responsiveness across various devices and screen sizes

WePrototype Technologies, Lagos, Nigeria(Remote)
Mobile Engineer | August 2021 - February 2022

- Developed and maintained multiple client-facing Flutter applications, including Fixx and Hash.
- Successfully implemented ACH bank integrations in Hash, enabling secure and seamless financial transactions.
- Integrated real-time stock trading functionalities into the Hash app, ensuring fast execution of trades and portfolio management.
- Designed and implemented push notifications to enhance user engagement, improving customer retention for both Fixx and Hash.
- Collaborated closely with the UI/UX team to redesign and enhance the user experience, resulting in improved usability and customer satisfaction.
- Built and optimized geolocation-based service matching for Fixx, allowing consumers to easily find nearby handymen.
- Developed and maintained a secure authentication system, including OAuth and biometric login, enhancing app security.
- Ensured seamless multi-platform performance, optimizing applications for both Android and iOS.
- Conducted performance optimization and debugging, reducing app crashes and improving load times.

- Wrote clean, reusable, and scalable code, ensuring maintainability for future updates and enhancements.

TECHNICAL SKILLS

Languages:
Dart, Kotlin, Java, Swift

Frameworks:
Flutter, SwiftUI, Android SDK, Jetpack Compose, React Native

Architecture:
Clean Architecture, MVVM, BLoC, Repository Pattern

Platforms:
Android, iOS, Web, Desktop

Backend & Data:
REST APIs, WebSockets, Supabase, Firebase

DevOps:
GitHub Actions, CircleCI, Fastlane, CI/CD Pipelines

Monitoring & Analytics:
Datadog, Sentry, Crashlytics, Mixpanel, CleverTap

Testing:
Unit Testing, Widget Testing, Integration Testing

Tools:
Git, AWS, Figma, Jira

Education

Middlesex University Dubai, UAE - *B.Sc in Information Technology, Computer Science*
First Class
